

PENDING CLAIMS  
 Application No. 10/012,029  
 Attorney Docket No. 05725.1003-00000  
 Filed: December 11, 2001

1-126. (Cancelled)

127. (Previously presented) A method of lengthening eyelashes, comprising:  
 applying to the eyelashes an effective amount of a mascara comprising a composition  
 comprising, in a physiologically acceptable medium:

at least one first polymer of formula (I):

in which:

- n is an integer which represents the number of amide units such that the number of ester groups present in said at least one structuring polymer ranges from 10% to 50% of the total number of all said ester groups and all said amide groups comprised in said at least one structuring polymer;

- R<sup>1</sup>, which are identical or different, are each chosen from alkyl groups with at least 4 carbon atoms and alkenyl groups with at least 4 carbon atoms;

- R<sup>2</sup>, which are identical or different, are each chosen from C<sub>4</sub> to C<sub>42</sub> hydrocarbon-based groups with the proviso that at least 50% of R<sup>2</sup> are chosen from C<sub>30</sub> to C<sub>42</sub> hydrocarbon-based groups;

- R<sup>3</sup>, which are identical or different, are each chosen from C<sub>2</sub> to C<sub>36</sub> hydrocarbon-based groups; and

-  $R^4$ , which are identical or different, are each chosen from hydrogen and  $C_1$  to  $C_{10}$  alkyl groups, with the proviso that at least 50% of all  $R^4$  are chosen from hydrogen; and

a dispersion of particles of at least one second polymer that is film-forming and insoluble in said medium.

128. (Cancelled)

129. (Previously presented) The method according to Claim 127, wherein the at least one first polymer has a weight-average molecular mass ranging from 1,000 to 30,000.

130. (Previously presented) The method according to claim 127, wherein the at least one first polymer is chosen from ethylene diamine/stearyl dimer tallate copolymer.

131. (Previously presented) The method according to claim 127, wherein  $R^2$ , which are identical or different, are each chosen from  $C_{10}$  to  $C_{42}$  hydrocarbon-based groups.
